

Freelance automation specialist certified across n8n, Make.com, and Zapier, building AI-integrated systems that replace manual business processes with reliable, self-healing workflows. Hands-on experience integrating Claude and Gemini directly into decision-making logic — lead scoring, email classification, structured data extraction, and autonomous AI agents — not just chat-based AI use. Every automation is built with error handling, audit trails, and human-review gates from day one, not added as an afterthought. Backed by 10 documented projects and over 6 years of unrelated but genuinely rigorous technical operations experience maintaining a live SCADA-controlled system.

SKILLS

n8n · Make.com · Zapier · Anthropic Claude · Gemini API · Ollama / Local AI Models · AI Agents · Prompt Engineering · REST APIs & Webhooks · JSON / Structured Data Parsing · CRM Integration (HubSpot, Airtable) · HighLevel CRM · Google Workspace Automation · Slack / Gmail API · JavaScript · Process Documentation

FEATURED AUTOMATION PROJECTS

Job Optimizer Agent n8n · Autonomous AI Agent

- Built an autonomous agent that reads a portfolio site, independently decides search keywords, queries three job-board APIs as self-selected tools, scores and filters every result, and delivers matches via Slack, Sheets, and email with no human in the loop.

Automated Sales Call Tracker & Dashboard n8n

- Built a Calendly-to-Sheets pipeline that captures bookings, detects attendance, links call transcripts, and uses AI to classify outcomes — with a conservative "Manual Review" fallback for ambiguous calls instead of forcing a wrong label.

Lead Capture & AI Qualification — Gmail → Google Sheets Make.com

- AI-qualified lead pipeline using Claude to score, de-duplicate, and route inbound emails, auto-escalating hot leads with prioritized replies.

Client Pipeline Automation Zapier

- Spreadsheet-driven CRM where a single status update triggers client emails, Drive folder creation, and a 3-day delayed follow-up chain.

Invoice & Payment Automation n8n

- Automated invoice intake, OCR verification, and staged payment follow-up/escalation, with a fresh payment re-check before any overdue notice goes out.

5 additional projects (AI Appointment Setter, E-Commerce Order Processing, AI Video Generator, Fearless Customer Support & Growth, AI Lead Generation Pipeline) with full breakdowns and screenshots at my portfolio: klarkyy00.github.io/Klark_portfolio

EXPERIENCE

Freelance AI Automation Specialist — Sales Tracker

Willers Coaching (Client: Sean) · Contract Project

- Delivered a complete, end-to-end sales call tracking automation — Calendly booking sync, Google Meet call recording, AI-driven transcript analysis, and a live results dashboard. Completed and handed off to the client.

Operation & Maintenance Specialist

Baggage Handling System, NAIA Terminal 3 · Dec 2019 – Present

- Monitor and maintain a SCADA-controlled system via 4 employers on the same critical infrastructure — real-time fault diagnosis, preventive maintenance, and uptime discipline that transfers directly to reliable automation design.

EDUCATION

BS Information Technology

University of Batangas — Lipa, Batangas
